SUMMARY

- A Senior Cloud & AI Platform Engineer with **7+ years** of experience in designing, deploying, and automating cloud infrastructure and **CI/CD pipelines** in complex, high-availability environments using **Azure, AWS, and Terraform**
- **Certified Kubernetes Administrator (CKA)** and Microsoft Certified **Azure Administrator (AZ-104)** with foundational expertise via **Azure Fundamentals (AZ-900)**
- Architected and scaled AI-driven SDLC platform (**NUMO**) for regulated banking environments (**FAB UAE**), implementing **AKS-based MLOps pipelines**, secure model deployment workflows, and enterprise-grade governance controls.
- **Led** a DevOps team to **automate CI/CD pipelines** with **Jenkins** and **GitLab Runners**, automating containerized application deployments on **Kubernetes**, decreased deployment times **by 60%** and improved application delivery frequency
- Delivered scalable infrastructure using **Terraform, CloudFormation, and Infrastructure as Code (IaC)** to enable consistent, secure, and scalable deployments.
- Directed and managed **AWS services** (EKS, EC2, ECS, Lambda, IAM, S3, RDS) and **Azure services** (VMs, VNets, Load Balancer, AKS, AAD, App Service, Function App, Key Vault).
- Achieved **25% cost savings** by driving cost optimization and improving reliability via automation initiatives like **EC2 scheduling, spot instance scaling**, and backup policy enforcement.
- Automated and **optimized container orchestration** using Docker and Kubernetes, with experience in advanced features such as **Helm packaging** and **Karpenter**-based auto-scaling.
- Configured and deployed Microsoft Azure cloud services such as **VNets, Subnets, NSGs, Load Balancers, Virtual machines, Azure SQL, ADF, Databricks, App service, Function App, Key vault, Azure AD, Azure Storage Account**.
- Developed **Python scripting** and writing **AWS Lambda functions** for automation and serverless architectures.

TECHNICAL SKILLS

Microsoft Azure: AKS, VNet, Azure AD, RBAC, Key Vault, App Gateway, Private Endpoints, Azure Monitor, Azure DevOps, Storage Accounts, Load Balancer, VM, Function Apps, Azure SQL

Amazon Web Services (AWS): EKS, ECS, EC2, RDS, S3, IAM, Lambda, CloudFormation, SSM, KMS, Route 53, Auto Scaling

AI & MLOps: Azure Machine Learning, Azure OpenAI Service, Cognitive Services, Azure AI Search, Azure Databricks, MLflow, LangChain, Amazon SageMaker, Bedrock, Comprehend, Rekognition, Textract

DevOps Tools: Jenkins, GitLab Runners, Groovy, Ansible, Terraform, CloudFormation, Shell Scripting

Containers: Docker, Kubernetes (EKS, AKS, Helm, Ingress, ConfigMaps), Karpenter

CI/CD Tools: Jenkins, GitHub Actions, Harness, Argo CD, Azure DevOps

Monitoring & Logging: CloudWatch, Prometheus, Grafana, ELK Stack, Troubleshooting

Scripting: Bash Shell, Groovy, Python

Databases: Amazon RDS, DynamoDB, Aurora, Redshift, Cosmos DB, MySQL, PostgreSQL, Cassandra, Rethink DB

EXPERIENCE

SiriusAI (*Cloud-Native Enterprise AI Platform Company*)

Oct 2025 – Present

Senior Cloud & AI Platform Engineer

Gurugram, India

- Architected scalable Kubernetes infrastructure for **NUMO (AI for SDLC)** platform at **First Abu Dhabi Bank (FAB UAE)**, supporting secure banking workloads with high availability and regulatory compliance.
- Orchestrated **Kubernetes infrastructure (EKS/AKS)** migration, enabling scalable model training, inference pipelines, and **microservices-based applications**, leading to **30%** faster model deployment cycles and improved resource utilization.
- Implemented **MLOps workflows** using **MLflow, Docker, and Kubernetes**, automating model packaging, versioning, and deployment across staging and production environments.
- Built secure **CI/CD pipelines** integrating **GitLab** with automated model validation, container scanning, and policy enforcement, reducing release cycles **by 35%**.
- Automated infrastructure provisioning using **Terraform and Helm**, delivering reproducible AI environments and reducing deployment time **by 80%**.
- Led migration of SiriusAI **Azure infrastructure** from India to US tenant using **Terraform**, re-architecting networking, IAM, Key Vault, AKS clusters, and storage with **zero data loss**; rebuilt **Azure DevOps CI/CD** with validation gates and policy enforcement.
- Rebuilt **CI/CD pipelines** post-migration, integrating **Azure DevOps** with automated validation and policy enforcement to ensure compliance across global tenants.

Biz2 Credit (*SaaS based Global Fintech Company*)

Oct 2021 – Sep 2025

Senior DevOps Engineer

New Delhi, India

- Designed and deployed highly available, scalable **AWS architectures (EC2, RDS, S3, Route 53)**, supporting **24/7 uptime** for critical business applications.
- Automated infrastructure provisioning using **Terraform and CloudFormation**, reducing manual setup time **by 90%** and delivering consistent deployments across environments.
- Built and **maintained CI/CD pipelines** using **Jenkins** and **GitLab** Runners, accelerating software delivery **by 40%** through automation and parallel jobs.
- Managed **750+ Linux servers**, automating patching, performance tuning, and monitoring to maintain **99.99% system availability**.
- Deployed and operated **production-grade EKS clusters** with reusable Helm charts, ingress configurations, and zero-downtime cluster upgrades across dev, staging, and production.
- Introduced Karpenter based auto-scaling using spot instances on EKS, cutting **compute costs by 30–40%**.
- Wrote **Python and Shell scripts** to automate tasks like EC2 lifecycle management, log rotation, and backup scheduling, improving operational efficiency by 50%.
- Implemented robust **multi-layered AWS backup strategies** enabling **60-day point-in-time** recovery for production databases; reduced storage **spends by 25%** via snapshot lifecycle policies.
- Led application **migration to AWS**, cutting deployment time **by 70%** and infrastructure provisioning from days to hours.
- Delivered internal tooling and onboarding support for **10+ application teams**, improving CI/CD adoption and reducing release-related incidents **by 30%**.
- Maintained **HA MySQL and MongoDB** setups with replication and recovery automation, and orchestrated Docker container builds with **20–30%** faster start times via image-size optimization.
- Hardened security via mod-proxy on **Apache HA web servers** and **AWS IAM/Systems Manager/KMS** controls with certificate rotation, mitigating **100+ vulnerabilities** and reducing server **response time by 15%**.

Tata Consultancy Services (*Global IT Service Company*)

Feb 2019 – Sep 2021

DevOps Engineer

Gurugram, India

- Led the first deployment of **BaNCs core banking solution** on AWS for a major financial client, driving cloud adoption in a regulated environment.
- Designed and implemented a secure **AWS infrastructure using EC2 (AMI-based), VPC, Security Groups, Route 53, EFS, and CloudWatch** for high availability and centralized monitoring.
- Installed and configured **JBoss Application Server (7.1 & 7.2)** in domain mode on RHEL, enabling clustering and failover support.
- Configured **Apache HTTP Server (reverse proxy)** and HA Proxy for load balancing, achieving reliable traffic routing and scaling for web applications.
- Developed custom **Bash scripts** and scheduled cron jobs to automate system tasks, improving operational efficiency and reducing **manual effort by 50%**.
- Built multiple **Continuous Deployment pipelines** with **Jenkins** and **GitLab CI**, boosting release frequency and system reliability.
- Integrated **Jenkins** with code repositories and testing tools for **Continuous Integration**, improving developer productivity.
- Built monitoring and alerting with **AWS CloudWatch**, supporting issue detection and operational visibility.

CERTIFICATION

Certified Kubernetes Administrator (CKA) by Linux Foundation

Microsoft Azure Administrator (AZ-104)

Microsoft Azure Fundamentals (AZ-900)

EDUCATION

Muzaffarpur Institute of Technology (MIT)

Jul 2014 – Aug 2018

Bachelor of Technology (B.Tech) in Information Technology (IT)

Muzaffarpur
