

# Md. Irshad

Senior DevOps Engineer 📞 +91- 9097421696 ✉ [abdurshad@gmail.com](mailto:abdurshad@gmail.com) [in linkedin.com/in/md-irshad-devops/](https://www.linkedin.com/in/md-irshad-devops/) | Delhi, INDIA

## Summary

- A Senior Cloud & AI Platform Engineer with 7+ years of experience in designing, deploying, and automating cloud infrastructure and CI/CD pipelines in complex, high-availability environments using Azure, AWS, and Terraform
- **Certified Kubernetes Administrator (CKA)** and Microsoft Certified **Azure Administrator (AZ-104)** with foundational expertise via **Azure Fundamentals (AZ-900)**
- **Architected and scaled AI-driven SDLC platform** (NUMO) for regulated banking environments (**FAB UAE**), implementing AKS-based MLOps pipelines, secure model deployment workflows, and **enterprise-grade governance controls**.
- **Led** a DevOps team to **automate CI/CD pipelines** with **Jenkins** and **GitLab Runners**, automating containerized application deployments on **Kubernetes**, decreased deployment times **by 60%** and improved application delivery frequency
- Delivered scalable infrastructure using **Terraform**, **CloudFormation**, and **Infrastructure as Code (IaC)** to enable consistent, secure, and scalable deployments.
- Directed and managed **AWS services** (EKS, EC2, ECS, Lambda, IAM, S3, RDS) and **Azure services** (VMs, VNets, Load Balancer, AKS, AAD, App Service, Function App, Key Vault).
- Achieved **25% cost savings** by driving cost optimization and improving reliability via automation initiatives like **EC2 scheduling**, **spot instance scaling**, and backup policy enforcement.
- Automated and **optimized container orchestration** using Docker and Kubernetes, with experience in advanced features such as **Helm packaging** and **Karpenter**-based auto-scaling.
- Configured and deployed Microsoft Azure cloud services such as **VNets**, **Subnets**, **NSGs**, **Load Balancers**, **Virtual machines**, **Azure SQL**, **ADF**, **Databricks**, **App service**, **Function App**, **Key vault**, **Azure AD**, Azure Storage Account.
- Developed **Python scripting** and writing **AWS Lambda functions** for automation and serverless architectures.

## Technical Skills

### Cloud:

**Microsoft Azure** (AKS, VNet, Azure AD, RBAC, Key Vault, App Gateway, Private Endpoints, Azure Monitor, Azure DevOps, Storage Accounts, Load Balancer, VM, Function Apps, Azure SQL)

**Amazon Web Services** – AWS (EKS, ECS, EC2, RDS, S3, IAM, Lambda, CloudFormation, SSM, KMS, Route 53, Auto Scaling)

**AI & MLOps:** Azure Machine Learning, Azure OpenAI Service, Cognitive Services, Azure AI Search, Azure Databricks, Amazon SageMaker, Bedrock, Comprehend, Rekognition, Textract

**DevOps Tools:** Jenkins, GitLab Runners, Groovy, Ansible, Terraform, CloudFormation, Shell

**Containers:** Docker, Kubernetes (EKS, Helm, Ingress, ConfigMaps), Karpenter

**CI/CD Tools:** Jenkins, GitHub Actions, Harness, Argo CD, Azure DevOps

**Monitoring & Logging:** CloudWatch, Prometheus, Grafana, ELK Stack, Troubleshooting

**Scripting:** Bash Shell, Groovy, Python

**Databases:** Amazon RDS, DynamoDB, Aurora, Redshift, Cosmos DB, MySQL, PostgreSQL, Cassandra, Rethink DB

## Experience

**SiriusAI** (*Cloud-Native Enterprise AI Platform Company*)

**Oct 2025 – Present**

Senior Cloud & AI Platform Engineer

*Gurugram, India*

- **Architected** and scaled cloud-native **infrastructure** for NUMO (AI for SDLC) platform deployed for **First Abu Dhabi Bank** (FAB UAE), ensuring secure, high-availability environments for enterprise **banking** workloads.
- Designed Kubernetes-based **AI** infrastructure (EKS/AKS), enabling scalable **model training**, inference pipelines, and microservices-based **AI applications**.
- Implemented **MLOps** workflows using MLflow, Docker, and Kubernetes, automating model packaging, versioning, and deployment across staging and **production** environments.
- Built secure **CI/CD** pipelines integrating **Gitlab** with automated **model validation**, container scanning, and policy enforcement, reducing release cycles by 35%.
- Automated infrastructure provisioning using **Terraform** and **Helm**, ensuring reproducible **AI environments** and

- reducing deployment time by 80%.
- Integrated AI tooling such as **OpenAI APIs, LangChain**, and **vector databases** (Pinecone/FAISS), enabling intelligent SDLC automation and knowledge-based workflows.
- Enforced **enterprise-grade security controls** (IAM, RBAC, Key Vault/Secrets Manager, network segmentation), ensuring **compliance** with banking **regulatory** standards.
- Led end-to-end **migration** of entire SiriusAI **Azure** infrastructure from India tenant to US tenant using **Terraform**, re-architecting networking, IAM, Key Vault, AKS clusters, and storage resources with zero data loss and minimal downtime.
- Rebuilt CI/CD pipelines post-migration, integrating **Azure DevOps** with automated validation and policy enforcement to ensure compliance across global tenants.

## **Biz2 Credit** (*SaaS based Global Fintech Company*)

**Oct 2021 – Sep 2025**

Senior DevOps Engineer

*New Delhi, India*

- Designed and deployed highly available, scalable **AWS architectures (EC2, RDS, S3, Route 53)**, supporting **24/7 uptime** for critical business applications.
- Automated infrastructure provisioning using **Terraform and CloudFormation**, reducing manual setup time by **90%** and ensuring consistent deployments across environments.
- Built and **maintained CI/CD pipelines** using **Jenkins** and **GitLab** Runners, accelerating software delivery by **40%** through automation and parallel jobs.
- Managed **750+ Linux servers**, automating patching, performance tuning, and monitoring to maintain **99.99% system availability**.
- Deployed and operated **production-grade EKS clusters**, implementing Helm-based application rollouts, ingress configurations, and cluster upgrades with zero downtime.
- Introduced Karpenter based auto-scaling using spot instances on EKS, cutting **compute costs by 30–40%**.
- Created and managed **reusable Helm charts**, standardizing Kubernetes deployments across dev, staging, and production environments.
- Wrote **Python and Shell scripts** to automate tasks like EC2 lifecycle management, log rotation, and backup scheduling, improving operational efficiency by 50%.
- Implemented robust **multi-layered AWS backup strategies** across environments, ensuring compliance and enabling **60-day point-in-time** recovery for production databases.
- Reduced AWS storage **spends by 25%** by automating snapshot lifecycle policies and eliminating redundant backups across multiple accounts.
- Led application **migration to AWS**, reducing deployment time by **70%** and suitability assessments, reducing infrastructure deployment time from days to hours.
- Delivered internal tooling and onboarding support for **10+ application teams**, improving CI/CD adoption and reducing release-related incidents by **30%**.
- Maintained high-availability setups for **MySQL and MongoDB** with replication, backups, and recovery automation across production and non-prod environments.
- Orchestrated Docker container builds and deployments, **optimizing image sizes** and speeding up container start times by **20–30%**.
- Hardened security and optimized performance of **Apache web servers** in HA setups using mod-proxy, mitigating **100+** potential vulnerabilities and reducing server **response time by 15%**.
- Enforced security and compliance via **AWS IAM, Systems Manager, KMS**, and certificate rotation policies.

## **Tata Consultancy Services** (*Global IT Service Company*)

**Feb 2019 – Sep 2021**

DevOps Engineer

*Gurugram, India*

- Led the first-ever deployment of **BaNCS core banking solution** on AWS for a major financial client, pioneering cloud adoption in a regulated environment.
- Designed and implemented a scalable, secure **AWS infrastructure using EC2 (AMI-based), VPC, Security Groups, Route 53, EFS, and CloudWatch** for high availability and centralized monitoring.
- Installed and configured **JBoss Application Server (7.1 & 7.2)** in domain mode on RHEL, enabling enterprise-grade clustering and failover support.
- Configured **Apache HTTP Server (reverse proxy)** and HA Proxy for load balancing, achieving seamless traffic routing

and scaling for dynamic web applications.

- Developed custom **Bash scripts** and scheduled cron jobs to automate system tasks, improving operational efficiency and reducing **manual effort by 50%**.
- Established multiple Continuous Deployment pipelines aligned with **DevOps best practices**, significantly boosting release frequency and system reliability.
- Integrated Jenkins with code repositories and testing tools to support a streamlined Continuous Integration workflow, enhancing developer productivity.
- Spearheaded efforts to embed monitoring and alerting using **AWS CloudWatch**, ensuring issue detection and operational visibility.

## Certification

---

- Certified Kubernetes Administrator (CKA) by Linux Foundation
- Microsoft Azure Administrator (AZ-104)
- Microsoft Azure Fundamentals (AZ-900)

## Education

---

**Muzaffarpur Institute of Technology (MIT)**

- *Bachelor of Technology (B.Tech) in Information Technology (IT)*

**Jul 2014 – Aug 2018**

*Muzaffarpur*
